Crushed grain measurement	No	No	Yes
Moisture range;			
• Grains & seeds	8-35%---->		3-40 %
• Oil seeds	5-25%---->		5-35 %

Farmcomp Oy with its Wile brand was the inventor of the hand held moisture meter, back in 1963 and throughout the years has become the World Leader. It has continued to develop the products to maintain its dominance in the market. Farmcomp sell to all Continents in the World, to over 80 countries worldwide.

Our database has nearly 50 years of information with over 200 different grains and seeds from Wheat to Jatropa and even seaweed. This experience allows us to more accurately measure the moisture for the different products and to continually update our information with new growing techniques and new strains of seeds and grains. The products are manufactured in our factory outside of Helsinki in Finland.

Grain moisture meter

Made in Finland
 www.wile.fi

For whole grains and seeds

The meter contains 16 programmed grains specially chosen for your countries most popular types

For whole grains and seeds

Add an external temperature probe – 95cm

For crushed grains and seeds

Specially coated teeth for longer life

WILE 55

The Wile 55 is our most popular model packed with features, the meter contains 16 pre-programmed grains specially chosen for your countries most popular types. It has a large numeric display and is easy to use made to the highest standards in Finland. The meter includes a temperature compensation system that adjusts your moisture calculation for the sampling conditions, and a memory for averaging your results.

WILE Temp

The Wile Temp comes with a 1.5 metre fibre glass probe with a digital display and is very easy to use.

The sensor is at the tip of the probe and measures from -15° to +70° C.

WILE 65

The Wile 65 is our middle of the range model with the additional feature of an interactive display for easier use. The meter can also measure temperature with an external temperature probe.

- Easy to use and read text display
- Own language selection
- Add an external temperature probe – 95cm (Order Wile651L – Accessory)

WILE 78

The Wile 78 is the top of the range model that measures 21 grains and seeds specific to each country.

- Results in less than 20 seconds
- Interactive LCD display in user's own language
- Automatic temperature compensation
- Wide moisture range 3%..40%, dependent on the grain
- Specially coated teeth for longer life
- Ergonomically designed cap

Why is Wile better?

- Small sample required
- Fits and works nicely in the hand for working in the field or yard
- Calibration adjustment for each grain type
- Easy to use buttons and clear big display
- Strong aluminium construction from Finland
- Easy to clean even with oil seeds
- Fast and reliable product service and support
